
IN BRIEF

Outline solution amplifies the spirit of praise at the World Changers Church International

World Changers Church International (WCCI) is a thriving Christian worship centre located in the 8,500-seat World Dome, Atlanta, Georgia.

In 2021, during the Covid-19 pandemic which forced the closure of many churches, Jason Farah of Outline US was approached by WCCI who expressed a need to upgrade their existing sound system.

“Based on the trust in our relationship and the clear advantages of the Outline system indicated by the simulations, they engaged me and Jeffrey Cox to design and install an Outline system for them,” Farah commented.

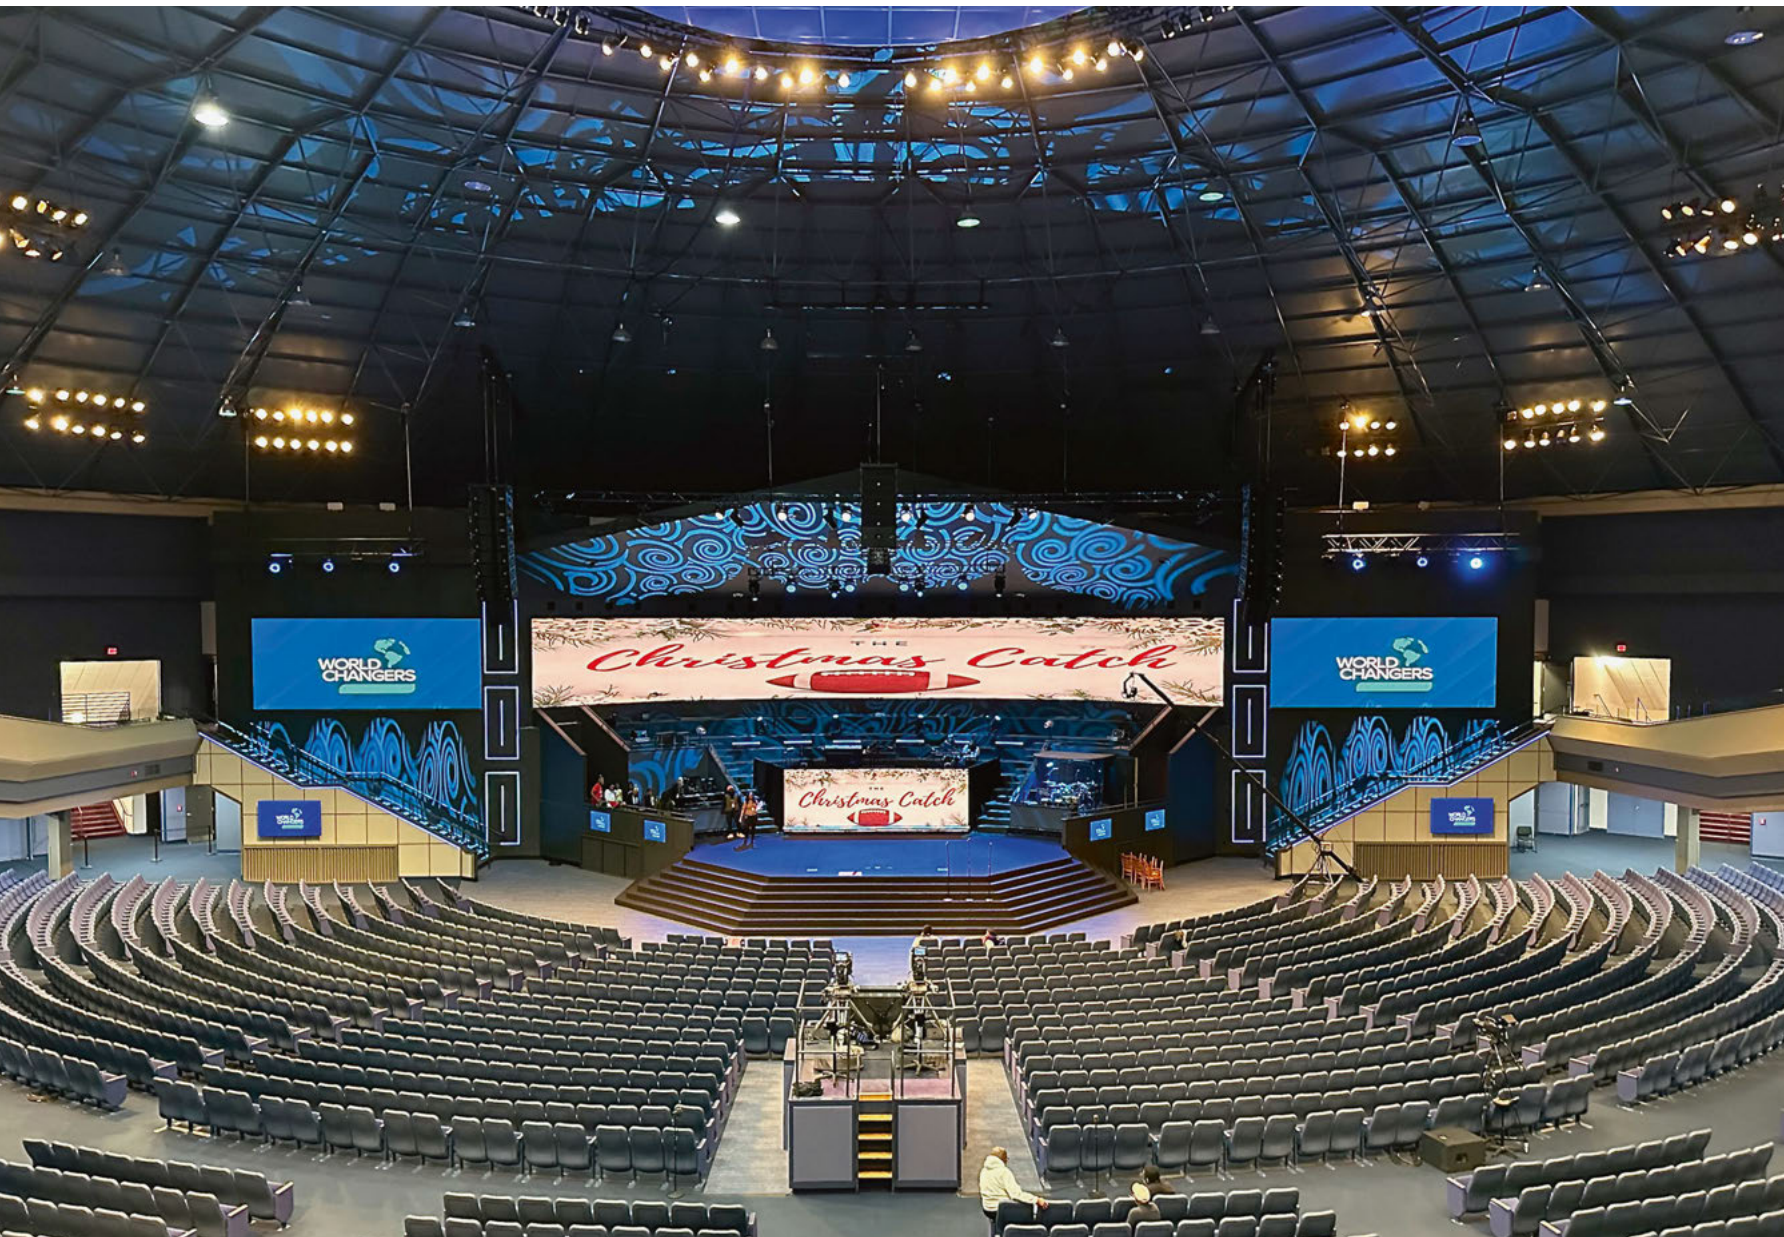

WCCI's new Outline system comprises four GTO cabinets at the top of the arrays for the long-throw, four GTO C-12 in the middle for the medium range, and four Mantas 28 at the bottom of the arrays for the nearfield.

Additionally, four GTO-SUBs in a cardioid configuration, complemented by three backwards-facing Mantas 28 to cover the upstage choir area, are also suspended.

“The expansive under-balcony space was covered with Vegas 24 speakers, which provided truly seamless coverage throughout that space. To this day, they are still raving how this little box made such a big difference in the worship experience throughout the entire listening space,” Farah said.

George Kelly, Front of House Audio Engineer at WCCI, revealed: “I'm most impressed with the clarity and stereo imaging. I find it very easy to mix on the Outline boxes. I find myself making small incremental adjustments, as opposed to a 4 or 5dB jump just to get a vocal or instrument to be heard.”
