Ashdod Lights Spectacle in Israel Gets Powerful Sound Support

ASHDOD, Israel — The Ashdod Lights *son et lumière* show invited visitors to walk around five key locations in the port city that hosting AV art installations, including video art projections on buildings and water screens, projection mapping, lighting and laser effects and holograms.

For the sound component of the attraction, organizers got audio system support by Tel Aviv-based Gidron Levitan, distributor for Outline.

Company owner, sound engineer and musician Eytan Gidron lauded the audio gear used in the setup, which started with Outline Stadia elements.

"Each Stadia 100 is actually four line array elements in one box, specifically designed for this type of application," Gidron noted. The Stadia elements were complemented by a variety of Outline subwoofers and surround loudspeaker elements.

Outline distributor Gidron Levitan stepped up with an ample complement of audio gear.
