

Outline STADIA series sets the pace in Philippines Olympic-grade athletics stadium

The New Clark City Athletics Stadium is an Olympic Grade Class 1 multi-purpose stadium located at New Clark City in the Philippines. The Athletics Stadium's spectacular architecture now hosts an impressive new Outline STADIA PA system composed of 30 loudspeaker enclosures powered by 8 Outline GTA Otto (Dante) power amps, installed by Amigo Entertainment Technologies, Inc., Outline's distributor for the Philippines.

Amigo also installed an Outline STADIA PA in the leading-edge New Clark City Sports Hub's IAAF-certified Class 1 Aquatics Center, designed by world-renowned Philippine architects Budji + Royal and adjacent to the Athletics Stadium.

The stadium's PA system is formed by Outline STADIA 100 LA enclosures a range that comprises three two-way loudspeaker modules with similar dimensions, identical horizontal directivity (100°) and either 10°, 20° or 30° vertical dispersion, enabling

them to ensure ideal coverage for any location, as system designers can deploy them to create sound reinforcement solutions that have excellent long-throw accuracy, thus keeping audible reflections and reverberation to a minimum.

New Clark City Aquatics Center

Regarding the choice of brand for this high-profile installation, carried out just in time for the Games, Amando Nieva Zamora is chairman and CEO of Amigo explains, "To handle this key project, which featured some challenging aspects, such as the fact that the building consists almost entirely in acoustically reflective products such as steel and

glass, we decided to install an Outline rig for the Italian manufacturer's proven leadership in the audio field and the fact that we are familiar with the systems' superior quality, thanks to fundamental feature for a venue of this class, type and size, such as their high intelligibility and extreme precision, even when very long throws are involved."

Another installation featuring Outline STADIA enclosures is in the Russian city of Yekaterinburg, where the Ekaterinburg Arena football stadium is equipped with no less than 121 STADIA modules, forming part of a rig with an impressive total of 223 Outline enclosures.
